## Tank Insulation

### Spray Foam Application

#### PROJECT

Lannon Tank Co.  
Lannon, WI

#### DETAILS

Storage Tank  
10' Dia. x 18' Ht  
2" of SPF  
2 Coats of Acrylic  
Elastomeric Coating

Spray Polyurethane Foam has many advantages as a tank insulation system. SPF has been utilized by many of our customers - from small tank projects to multi-million gallon vessels.

When the seamless polyurethane foam is applied with the proper elastomeric coating, insulated vessels like the tank shown above will resist corrosion, chemicals, weathering and moisture for many years without the need for replacement. Spray Polyurethane Foam has the highest R-Value of any insulation material used for construction. This durable foam conforms to any substrate and becomes part of the structure. By forming a thick, seamless barrier, SPF seals penetrations, voids, and junctions.

SPF offers the best combination of waterproofing, energy-efficiency, and weatherability available in the marketplace!
